We do about the carbon tax

Climate change global warming taxes! How you pay your tax? Conventions about your nature conventions and you what you does? What your country actually does for you? What is carbon tax scam?

Our purposes are

1. Making people well known about carbon tax.
2. Making people to ask questions about tallen stories.
3. Making people to know how their country does for them.

It's to question that they teach CO2 a bad gas (we prove it's a lie) and they (the western countries and America) post TAXES on the developing nations for Carbon emission. It's a trick and fraudulent way of money making. We question the Carbon Tax's truthfulness

Outline few steps:

1. This is an international level topic; we can find so many various nationalities in Sri Lanka to take quick interviews
2. Campus PHDs
3. Children and other people on "Why they grow plants?" "What they think of CO2"
4. We get documentation and data proves

Story line is we going to ask why are you planting this tree to a small school kid who is trying to plant a tree, then an old man who is planting as well. then about recycling we are starting with a question, why our government never forced to plant trees and also recycling/ plastic usage we should highlight we only hear a very silent voice from government and a big louder voice from NGO's then suddenly we start to talk about conventions on nature and the submitted reports. Then we've to talk about corporate society who rules third world countries

We give a clear report about all carbon rates /the report what we going to give will have all the minute ranges and details. Then we are going to talk about caps trades and scams where we've faced due to global warming. and we going to highlight only the carbon tax first of all we've to give very clear and simple descriptions about simple terms like carbon tax, corporate rules, corporate society, government false and what we have (youngsters) to for this.
